1   Introduction

This document describes the links between the specifications and use cases for the other program wrappers described in this directory.

2   Dependencies

The following dependencies exist; these must be taken into account when defining the specifications and use cases for the appropriate program wrappers and also when it comes to the implementation.
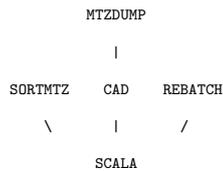

```
Mosflm is standalone, though could be argued to rely on the Labelit
wrappers.

Sortmtz depends on nothing? or Mtzdump.

Cad depends on nothing? No - it will depend on Mtzdump.

Scala depends on Sortmtz and Cad and Rebatch and Reindex.

Pointless depends on nothing (initially) though to handle input
in other formats will require Combat.

        MTZDUMP

           |

SORTMTZ   CAD    REBATCH

    \      |     /

        SCALA
```

3   Specified Wrappers

- Sortmtz

4   Implemented Wrappers

- Sortmtz
